June, 2014

Questions

Questions

FPC asked:

Questions

FPC asked:

- Should targets for net and/or gross asset positions be added to target for surplus?

Questions

FPC asked:

- Should targets for net and/or gross asset positions be added to target for surplus?
- Management of government portfolio:

Questions

FPC asked:

- Should targets for net and/or gross asset positions be added to target for surplus?
- Management of government portfolio:
  - net and gross positions?

Questions

FPC asked:

- Should targets for net and/or gross asset positions be added to target for surplus?
- Management of government portfolio:
  - net and gross positions?
  - liquidity content?

Questions

FPC asked:

- Should targets for net and/or gross asset positions be added to target for surplus?
- Management of government portfolio:
  - net and gross positions?
  - liquidity content?
  - extra need to maintain debt to ensure market access in times of need?

Questions

FPC asked:

- Should targets for net and/or gross asset positions be added to target for surplus?
- Management of government portfolio:
  - net and gross positions?
  - liquidity content?
  - extra need to maintain debt to ensure market access in times of need?
  - extra need to supply market need for “safe” debt?

Questions

FPC asked:

- Should targets for net and/or gross asset positions be added to target for surplus?
- Management of government portfolio:
  - net and gross positions?
  - liquidity content?
  - extra need to maintain debt to ensure market access in times of need?
  - extra need to supply market need for “safe” debt?
  - structure of balance sheet?

Questions

FPC asked:

- Should targets for net and/or gross asset positions be added to target for surplus?
- Management of government portfolio:
  - net and gross positions?
  - liquidity content?
  - extra need to maintain debt to ensure market access in times of need?
  - extra need to supply market need for “safe” debt?
  - structure of balance sheet?
  - active management?

Questions

FPC asked:

- Should targets for net and/or gross asset positions be added to target for surplus?
- Management of government portfolio:
    - net and gross positions?
    - liquidity content?
    - extra need to maintain debt to ensure market access in times of need?
    - extra need to supply market need for “safe” debt?
    - structure of balance sheet?
    - active management?
    - investment in domestic or foreign assets?

Nature of Dirk's answers

Nature of Dirk's answers

Carried out on a rather abstract level:

Nature of Dirk's answers

Carried out on a rather abstract level:

- accounting framework distinguishing assets and liabilities (could in general be subdivided into further categories); very useful, embraced by FPC in 2014 report

Nature of Dirk's answers

Carried out on a rather abstract level:

- accounting framework distinguishing assets and liabilities (could in general be subdivided into further categories); very useful, embraced by FPC in 2014 report
- (advanced) economic theory discussing a number of different *possible* mechanisms

Nature of Dirk's answers

Carried out on a rather abstract level:

- accounting framework distinguishing assets and liabilities (could in general be subdivided into further categories); very useful, embraced by FPC in 2014 report
- (advanced) economic theory discussing a number of different *possible* mechanisms
- not quantitative, i.e., few suggestions for numbers.

Reason for this

Reason for this

- On the level of research: a very difficult literature!

Reason for this

- On the level of research: a very difficult literature!
  - A saving and portfolio problem under uncertainty with incomplete set of instruments

Reason for this

- On the level of research: a very difficult literature!
  - A saving and portfolio problem under uncertainty with incomplete set of instruments but
  - potential effects of government policy choice on the private economy

Reason for this

- On the level of research: a very difficult literature!
  - A saving and portfolio problem under uncertainty with incomplete set of instruments but
  - potential effects of government policy choice on the private economy and
  - time-inconsistency issues for a variety of reasons.

Reason for this

- On the level of research: a very difficult literature!
  - A saving and portfolio problem under uncertainty with incomplete set of instruments but
  - potential effects of government policy choice on the private economy and
  - time-inconsistency issues for a variety of reasons.
- There is no consensus in the literature on

  - optimal quantitative prescriptions.
- Note: there is (much) more consensus on “the” macroeconomic model than on optimal government fiscal rules and portfolio prescriptions!

Dirk’s survey is balanced and an excellent summary of what there is.

Specific comments I: changes in (nature of) target?

Specific comments I: changes in (nature of) target?

- I agree with the surplus vs. net asset position point in principle:

Specific comments I: changes in (nature of) target?

- I agree with the surplus vs. net asset position point in principle:
  - the latter is more of direct relevance, the former should depend on macroeconomic “conditions”

Specific comments I: changes in (nature of) target?

- I agree with the surplus vs. net asset position point in principle:
  - the latter is more of direct relevance, the former should depend on macroeconomic "conditions"
  - for example: long-run asset/GDP ratio becomes $\frac{s}{g}$

Specific comments I: changes in (nature of) target?

- I agree with the surplus vs. net asset position point in principle:
  - the latter is more of direct relevance, the former should depend on macroeconomic "conditions"
  - for example: long-run asset/GDP ratio becomes $\frac{s}{g}$ (Piketty!)

Specific comments I: changes in (nature of) target?

- I agree with the surplus vs. net asset position point in principle:
  - the latter is more of direct relevance, the former should depend on macroeconomic "conditions"
  - for example: long-run asset/GDP ratio becomes $\frac{s}{g}$ (Piketty!) where clearly a reasonable choice for s must depend on g.

Specific comments I: changes in (nature of) target?

- I agree with the surplus vs. net asset position point in principle:
  - the latter is more of direct relevance, the former should depend on macroeconomic “conditions”
  - for example: long-run asset/GDP ratio becomes $\frac{s}{g}$ (Piketty!) where clearly a reasonable choice for s must depend on g.
- I agree that no separate target for gross debt/GDP “ought to be” needed.

Specific comments I: changes in (nature of) target?

- I agree with the surplus vs. net asset position point in principle:
  - the latter is more of direct relevance, the former should depend on macroeconomic "conditions"
  - for example: long-run asset/GDP ratio becomes $\frac{s}{g}$ (Piketty!) where clearly a reasonable choice for s must depend on g.
- I agree that no separate target for gross debt/GDP "ought to be" needed.
- But:

Specific comments I: changes in (nature of) target?

- I agree with the surplus vs. net asset position point in principle:
  - the latter is more of direct relevance, the former should depend on macroeconomic “conditions”
  - for example: long-run asset/GDP ratio becomes $\frac{s}{g}$ (Piketty!) where clearly a reasonable choice for s must depend on g.
- I agree that no separate target for gross debt/GDP “ought to be” needed.
- But:
  - because of transparency and need for continuity, the argument regarding surplus vs. net asset position not sufficiently strong for a rule change

Specific comments I: changes in (nature of) target?

- I agree with the surplus vs. net asset position point in principle:
  - the latter is more of direct relevance, the former should depend on macroeconomic "conditions"
  - for example: long-run asset/GDP ratio becomes $\frac{s}{g}$ (Piketty!) where clearly a reasonable choice for s must depend on g.
- I agree that no separate target for gross debt/GDP "ought to be" needed.
- But:
  - because of transparency and need for continuity, the argument regarding surplus vs. net asset position not sufficiently strong for a rule change
  - situation similar to inflation-target discussions (why 2%, why not a price-level target,...?): having A rule is probably more important than having the RIGHT rule

Specific comments I: changes in (nature of) target?

- I agree with the surplus vs. net asset position point in principle:
  - the latter is more of direct relevance, the former should depend on macroeconomic “conditions”
  - for example: long-run asset/GDP ratio becomes $\frac{s}{g}$ (Piketty!) where clearly a reasonable choice for s must depend on g.
- I agree that no separate target for gross debt/GDP “ought to be” needed.
- But:
  - because of transparency and need for continuity, the argument regarding surplus vs. net asset position not sufficiently strong for a rule change
  - situation similar to inflation-target discussions (why 2%, why not a price-level target,...?): having A rule is probably more important than having the RIGHT rule
  - there is an argument for a gross debt/GDP target: the market might care about it (maybe it cannot judge the liquidity of the asset side?).

Specific comments II: more rules needed?

Specific comments II: more rules needed?

- In a broader sense, the surplus target (or a net asset target) is a commitment to only part of the whole fiscal policy package; one could have more detailed rules.

Specific comments II: more rules needed?

- In a broader sense, the surplus target (or a net asset target) is a commitment to only part of the whole fiscal policy package; one could have more detailed rules.
- These could follow Dirk's suggestions, but given the state of the literature, we are far from a qualitative consensus on these, let alone a quantitative one.

Specific comments II: more rules needed?

- In a broader sense, the surplus target (or a net asset target) is a commitment to only part of the whole fiscal policy package; one could have more detailed rules.
- These could follow Dirk's suggestions, but given the state of the literature, we are far from a qualitative consensus on these, let alone a quantitative one.
- It would also not be wise to over-commit: recall there is a cost of commitment.

Specific comments III: other guidelines

Specific comments III: other guidelines

- Exploiting arbitrage?

Specific comments III: other guidelines

- Exploiting arbitrage? With foreign investments, probably yes, under controlled risk.

Specific comments III: other guidelines

- Exploiting arbitrage? With foreign investments, probably yes, under controlled risk.
- Inflation as shock absorber?

Specific comments III: other guidelines

- Exploiting arbitrage? With foreign investments, probably yes, under controlled risk.
- Inflation as shock absorber? Also think about redistribution effects (cf. Piketty).

Specific comments III: other guidelines

- Exploiting arbitrage? With foreign investments, probably yes, under controlled risk.
- Inflation as shock absorber? Also think about redistribution effects (cf. Piketty).
- How strengthen resilience to “runs”?

Specific comments III: other guidelines

- Exploiting arbitrage? With foreign investments, probably yes, under controlled risk.
- Inflation as shock absorber? Also think about redistribution effects (cf. Piketty).
- How strengthen resilience to "runs"? Not sure if long maturity helps.
